Question 1
Daniel Lutes
1.
"A system is something that does not function all on its own. A system is composed of many smaller parts, called sub-systems, that rely on each other" (Vybihal 1). It is clear that the getChar method has no function on its own, it is simply an idea without a home. When getChar is placed into a system properly, however, it gains functionality through interaction with other pieces of the system.

2.
The goal of The Linux Documentation Project is the formulation and dissemination of free GNU and Linux documentation in an efficient and accessible manner.

3.
Top Three Linux-using countries: USA, Brazil, Germany.

4.
What are Vi, Vim, Emacs, and Pico are all examples of screen-oriented text editors supported by Unix and Unix-like systems.

5.
Vi: the majority of talk regarding Vi is seemingly closely related to Vim
Vim: http://www.reddit.com/r/vim
Emacs: http://www.reddit.com/r/emacs
Pico: Aside from a few stray links Pico doesn't seem to an active community.

6.
 Users of Vim seem to support it because it is fast, almost always pre-installed and you can open it, do a quick edit and then quit.
